AB Vascular grafts are made of porous poly(ethylene terephthalate) [25038-59-9] coated on the inner side with ≥3 layers of collagen (from cattle skin) mixed with a plasticizer and cross-linked by exposure to H₂CO vapors. Thus, Dacron grafts were coated on the inner side with an aqueous paste containing 2% cattle skin collagen (preparation given), 8% glycerol, and 17% EtOH, applied with a syringe. The paste was spread over the inner surface by manual massage, and dried. The coating was repeated 3 times, followed by exposure to H₂CO vapor for 3 min. The grafts obtained showed low porosity, were antithrombogenic, and were blood tight.
